EXPERIENCE

FULLSTACK SOFTWARE DEVELOPER

DXC Technology

Apr 2023 - Present

- At DXC my main focus is developing Spring-based web applications. I contributed to two major projects: one for the Danish tax authorities and another for the Italian tax authorities. My primary tech stack included React and Java Spring, and I played a key role in refactoring and adding new features to both projects. This involved significant efforts in cleaning up the codebase to slowly eliminate technical debt, while also implementing new features.

FULLSTACK SOFTWARE DEVELOPER

pressrelations

Feb 2022 - Mar 2023

- My responsibilities in pressrelations were to develop dynamic and engaging web applications tailored for end-users who utilized the company's software. My work involved not only creating responsive and interactive interfaces with React but also integrating these applications seamlessly with backend services to deliver a cohesive and robust user experience. As part of my full-stack responsibilities, I became deeply involved in building new features, optimizing performance, and ensuring that the applications met high standards of usability and accessibility.

JUNIOR JAVA SOFTWARE DEVELOPER

clouway

Jul 2020 - Feb 2022

- At my first job in clouway I was surrounded by great colleagues who taught me a lot of things and set the foundations for my growth and learning as a software developer. It is thanks to them that I learned how to work with Git, Docker, RabbitMQ and to become accustomed and comfortable working with the Agile/SCRUM methodology.
- I worked in a small team in an on-site office environment where we tightly collaborated to develop ERP systems for our clients. I can proudly say I learned a lot and for the time I was there I was able to solidify good programming practices as well as learn how to write clean code, test, refactor and clean up tech debt in the backlog whenever possible. Juggling both university and a full-time job allowed me to rapidly advance my skills in Java and learn how to work with Spring framework.
